

# Pipe Cleaner Crosses

1) Start by folding your pipe cleaner in half:

2) Grip the bottom end of the folded pipe cleaner in your left hand, and the top end in your right hand, and push inward from both ends, so the middle starts bending outward.

3) Once you have it like you want it, straighten the bars so they look like this:

4) Grip the cross at the middle, where all the sections meet, and twist each section so it's secure. Start with the top section: twist at the base (right above the crossbar), then twist another time higher up, and a third time at the very tip-top.
